Project overview

Our project name is an ecommerce website which mainly deals in imitation jewelry, Cosmetics and Perfumes. And this project rely's on only two modules.

Admin Functionalities

❖ **Manage Categories and Products:**

Add new categories to the website for better organization.

Delete categories that are no longer relevant.

Add new products to the website, specifying details such as name, description, price, and images.

Delete products that are discontinued or no longer in stock.

❖ **Update Product Information:**

Edit and update the information for existing products, including price, description, and images.

❖ **Database Management:**

Add or delete records in the website's database, which may include information about products, users, orders, and more.

❖ **Database Backup:**

Regularly create backups of the database to prevent data loss in case of system failures, hacking attempts, or other unforeseen events.

❖ **Generate/View Top 10 Best Selling Products Report:**

Generate and view reports that list the top 10 best-selling products, which can help in assessing product popularity and optimizing sales strategies.

❖ **Generate/View Top 10 Clients/Users Report:**

Generate and view reports that identify the top 10 clients or users who are making the maximum number of purchases on the website. This information can be useful for customer engagement and marketing strategies.

Customer Functionalities

- ❖ **Browse Categories and Products:**

Explore and navigate through the available categories and products on the website.

- ❖ **Add Products to Shopping Basket:**

Select products of interest and add them to the shopping basket or cart for potential purchase.

- ❖ **Specify Quantity:**

Set the desired quantity for each selected product within the shopping basket.

- ❖ **Complete/Finalize Order:**

Proceed to complete and finalize the order by providing necessary information.

- ❖ **Search Products by Name:**

Utilize the search functionality to find specific products by name or keywords.

- ❖ **Track Order:**

Access order tracking features to monitor the status and delivery progress of their placed orders. This may include estimated delivery times and shipment tracking information.

- ❖ **Product Reviews:**

Provide product reviews after completing an order. Customers can:

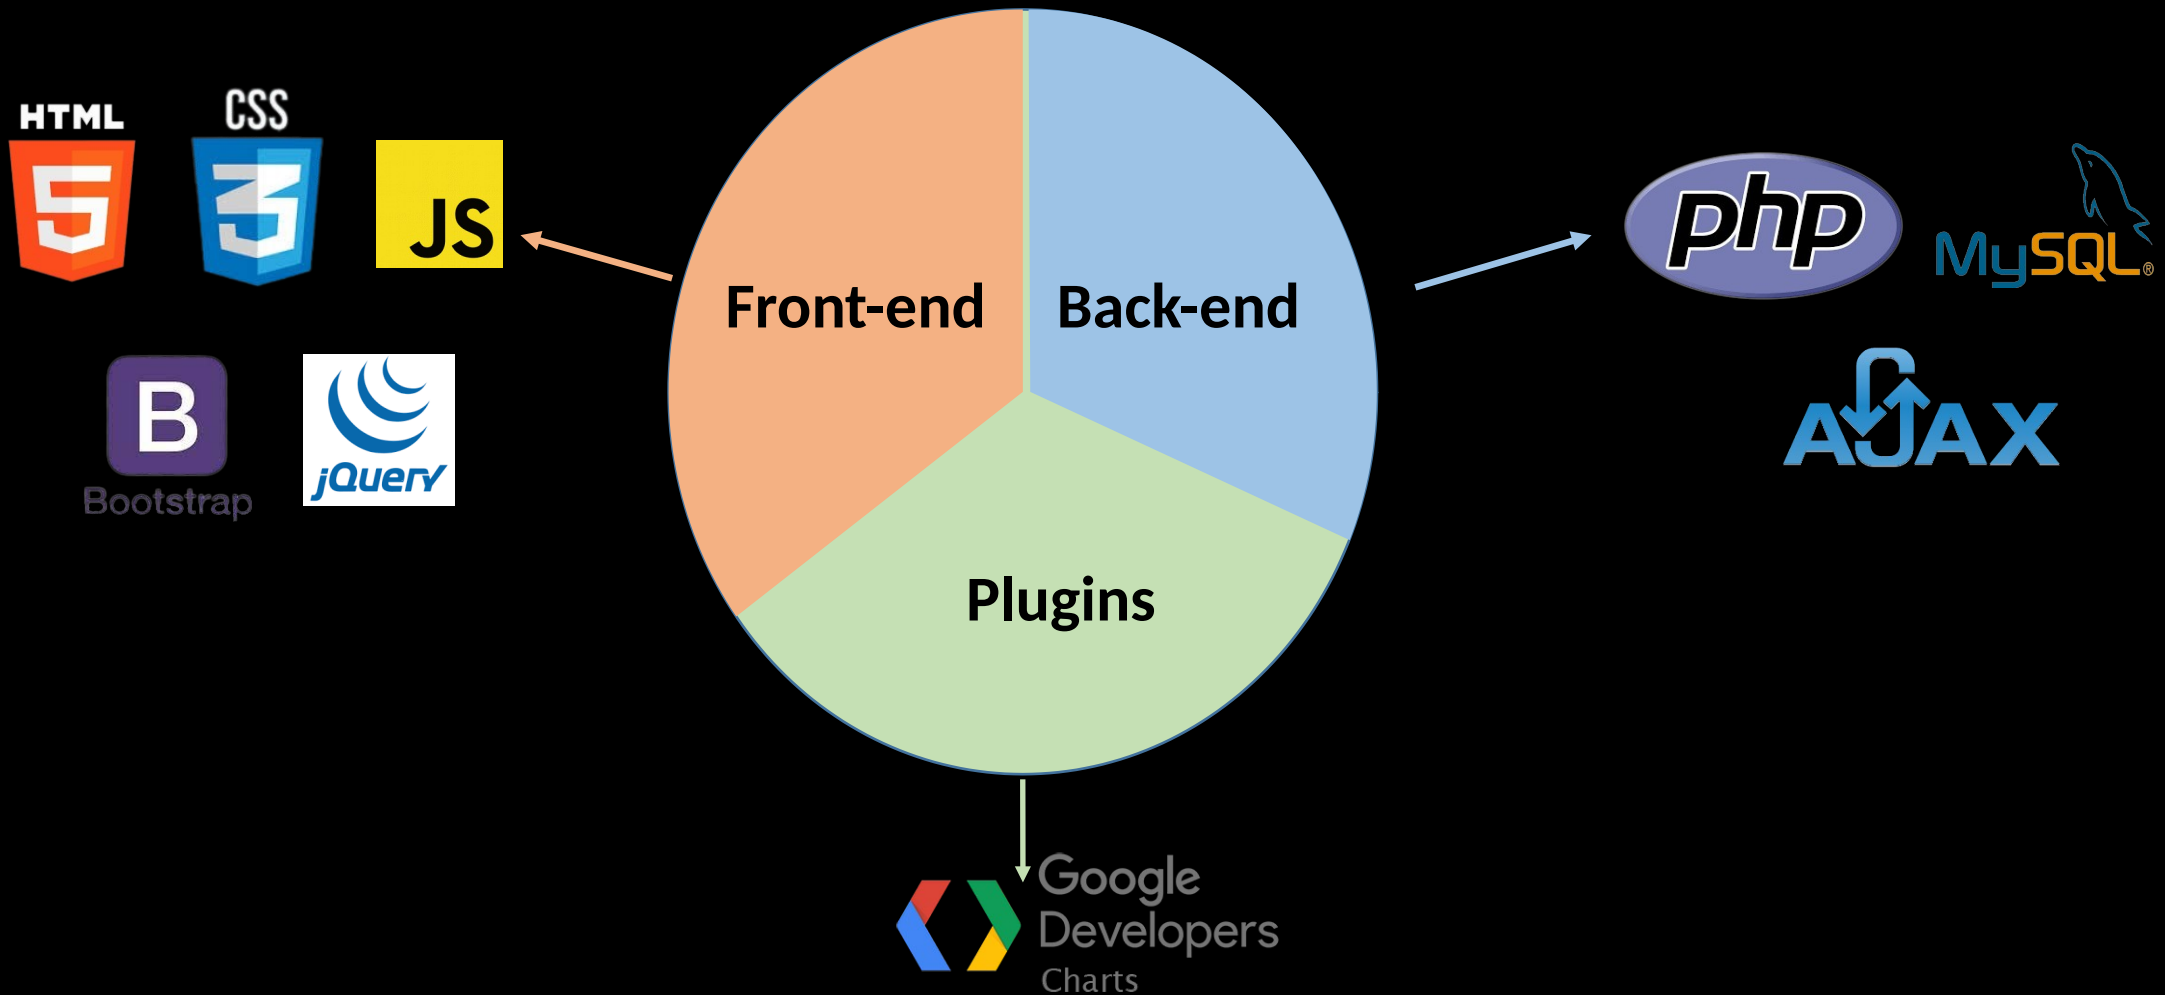

Submit a review with their thoughts on the purchased product.

Update their review at a later time to reflect any changes in their opinion.

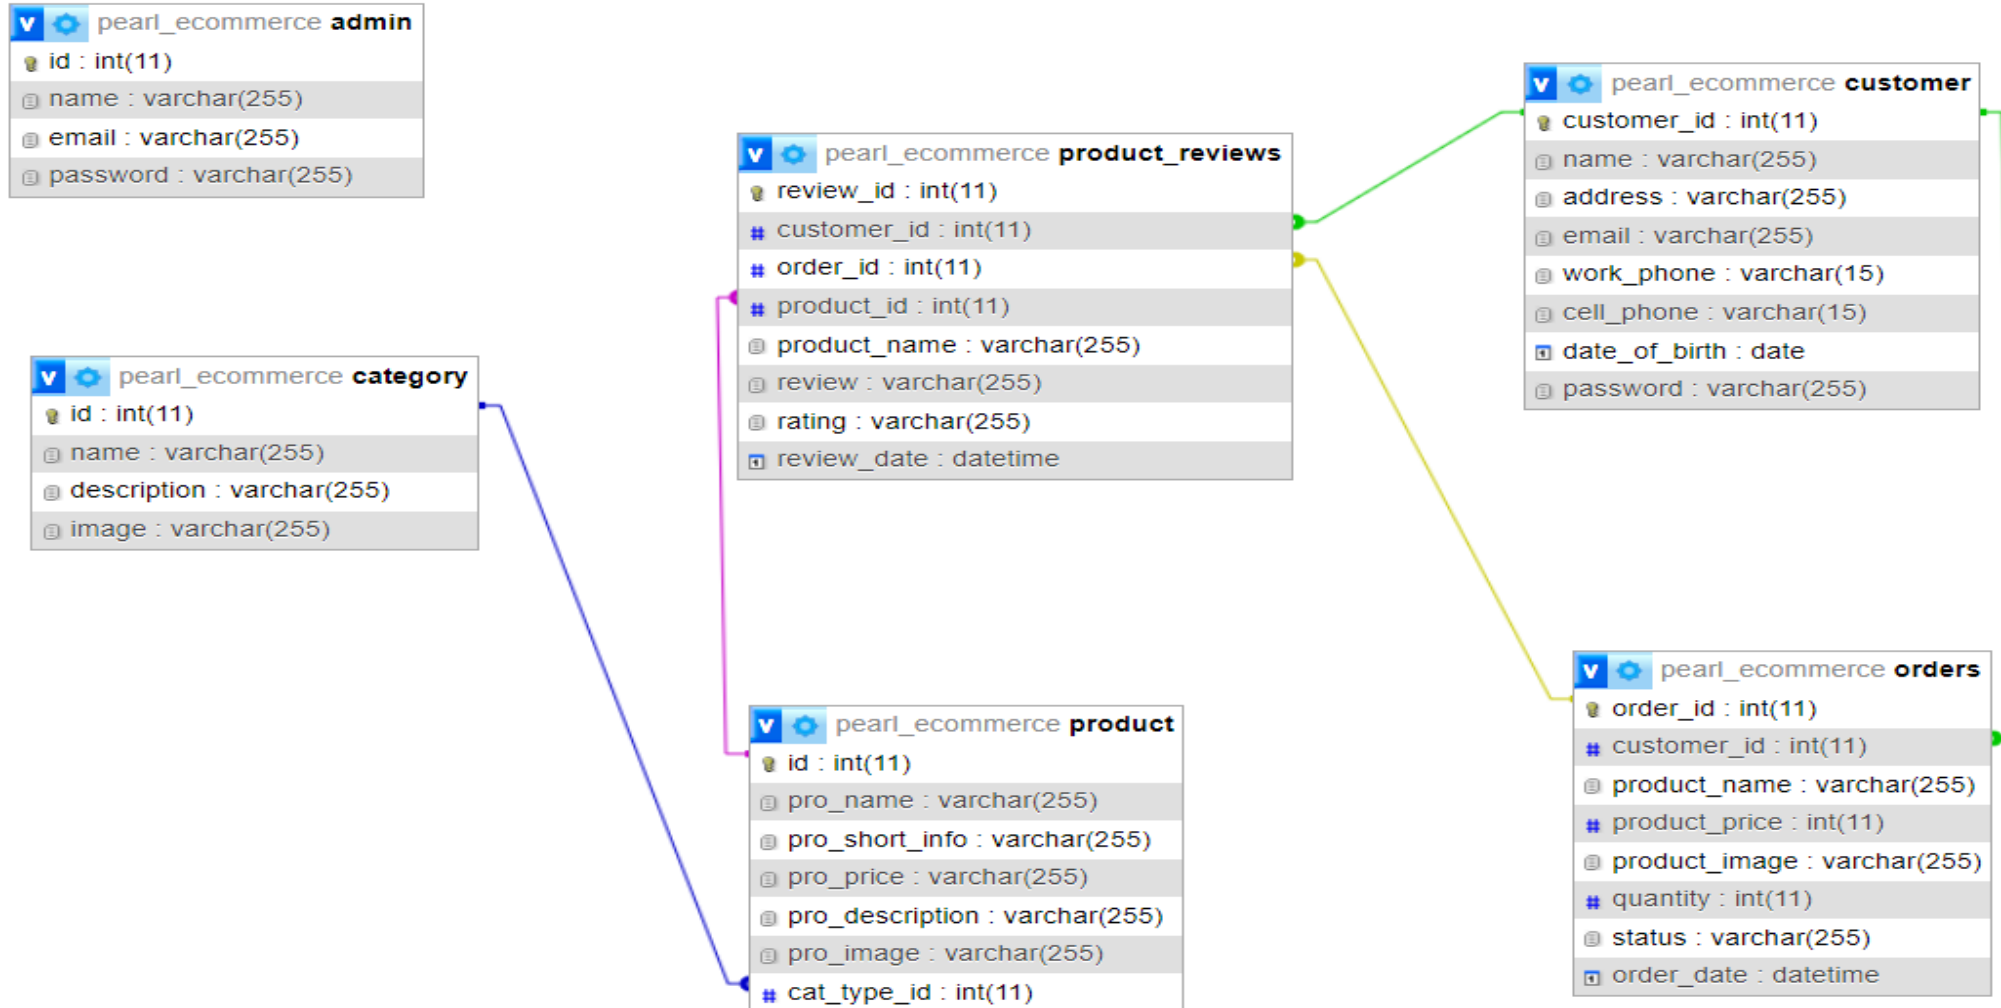

Delete their review if they no longer wish to have it displayed.

Technologies used

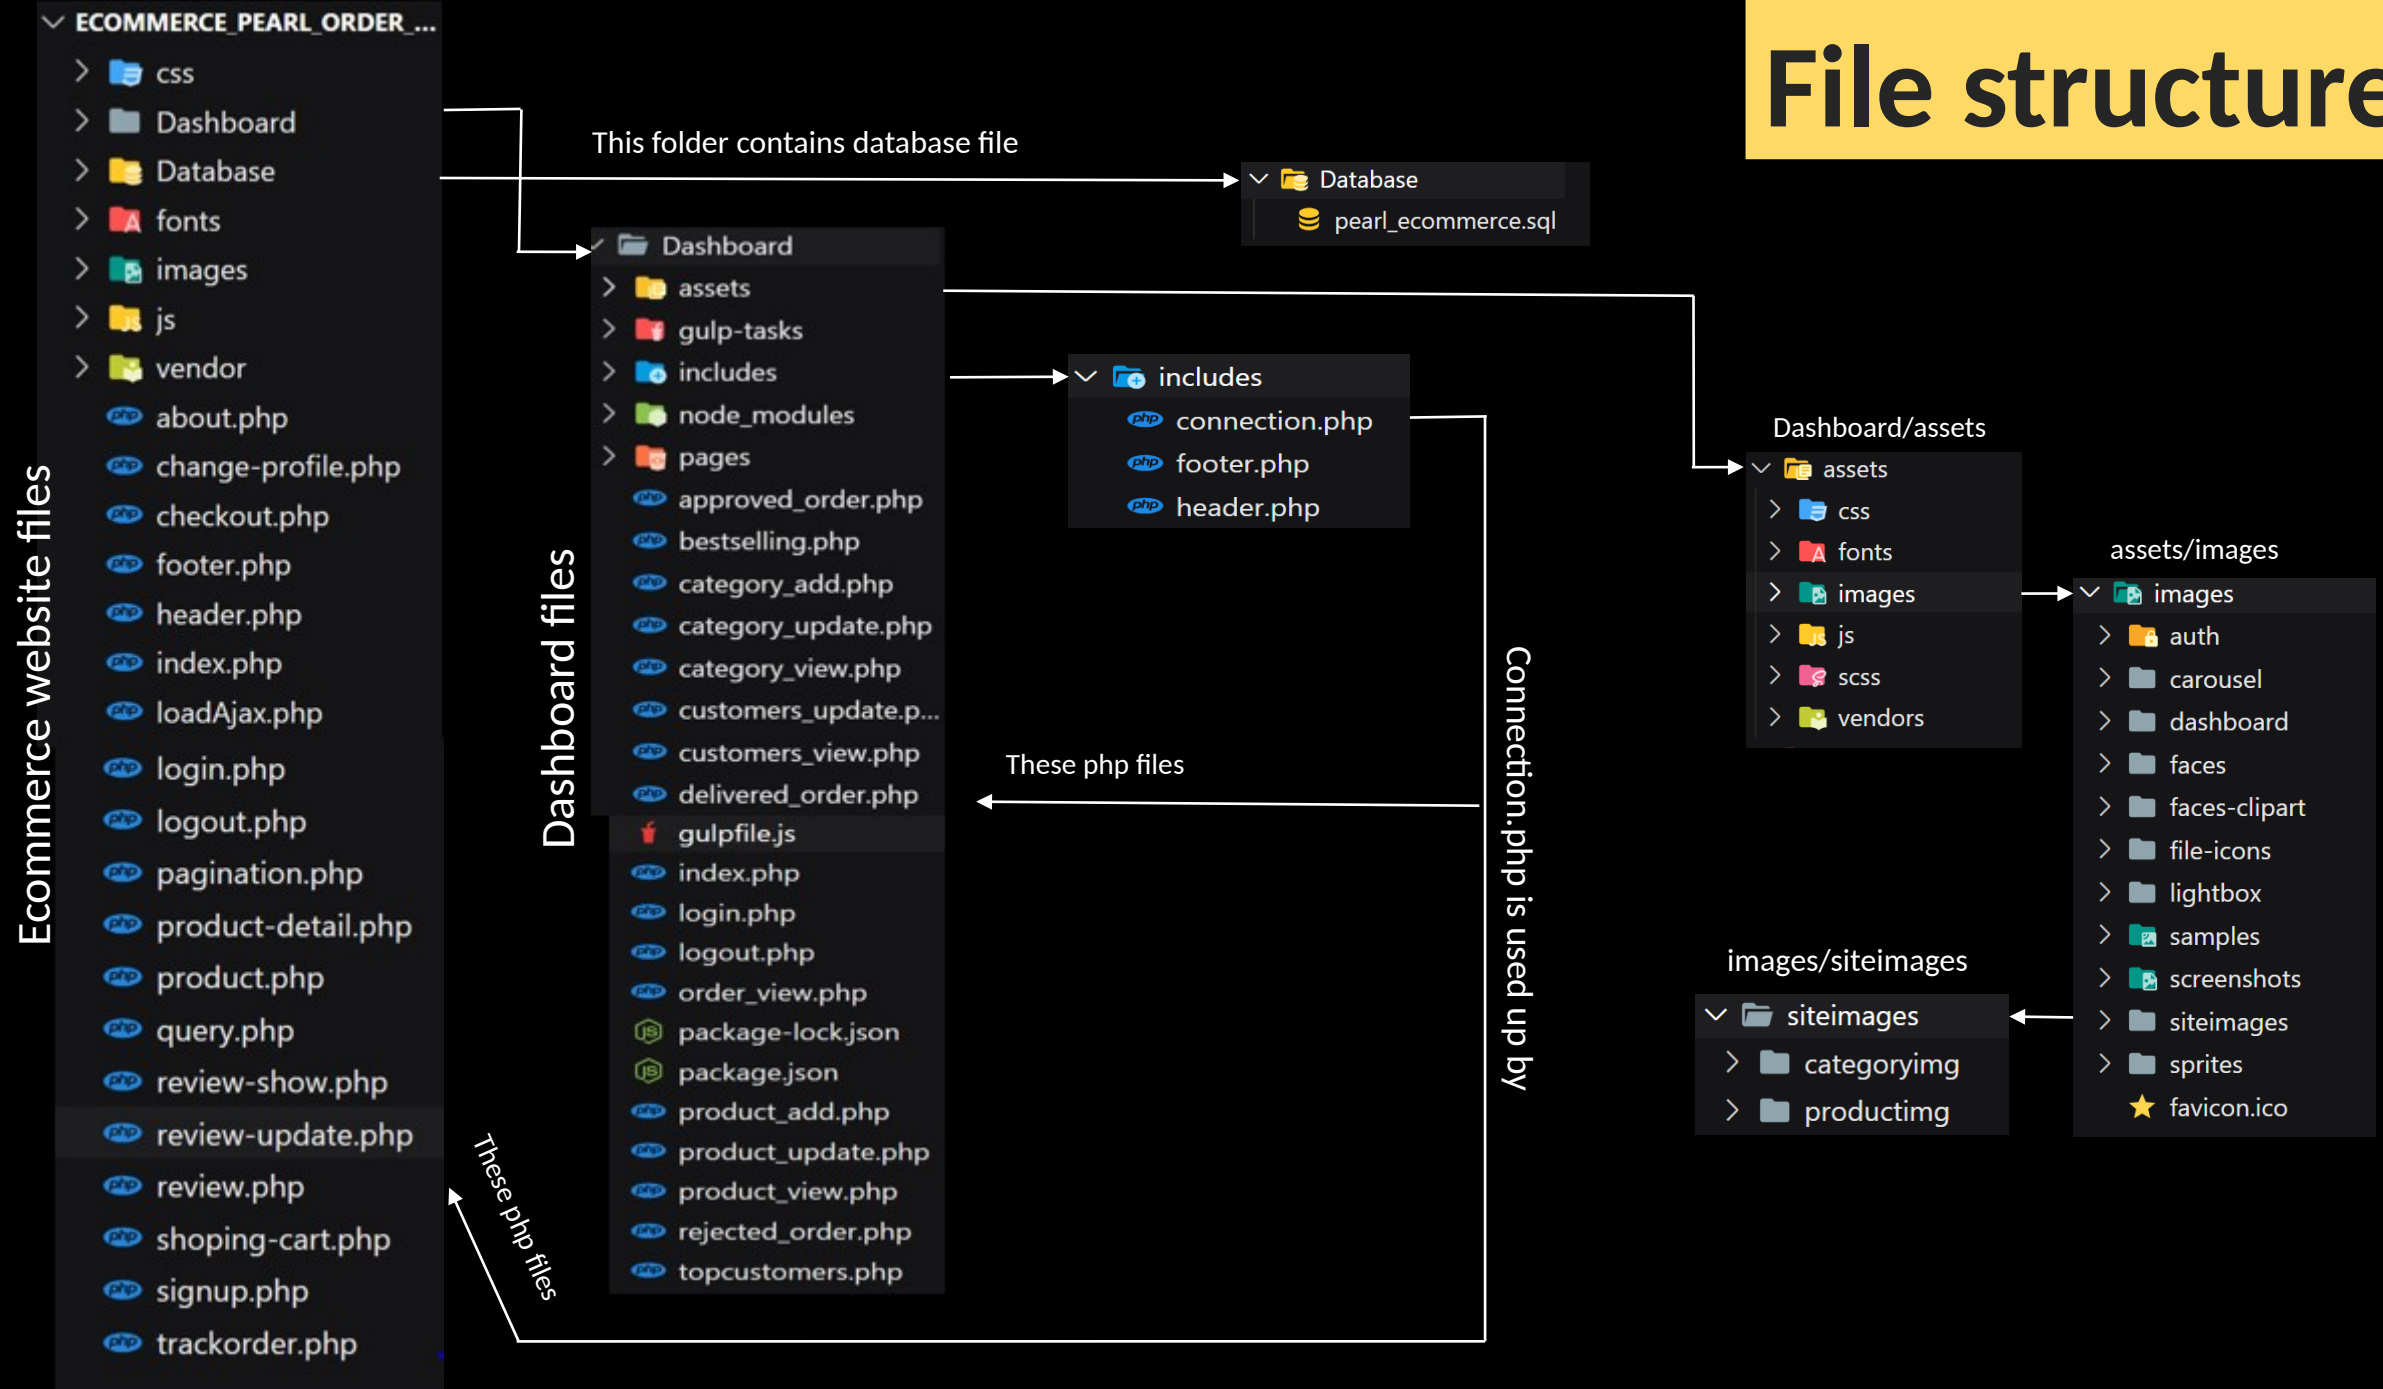

As Our Project has full stack functionality app so we have used frontend+backend technologies.

Database Design

File structure

Flowchart/Process diagram

Admin Perspective

1) Entering website url in search bar

Website URL/Dashboard

2) Redirected to login page

Login page

If values
incorrect

If values correct

3) Redirected to Dashboard

Dashboard main page

- Add/View/Update/Delete/Category
- Add/View/Update/Delete Product
- View/Update/Delete Customers
- View/Accept/Reject/change status of orders
- View Top 10 Best Selling products
- View Top 10 Customers

Customer Perspective

1) Entering website url in search bar

Website URL

2) Redirected to website main page

Installation Guide

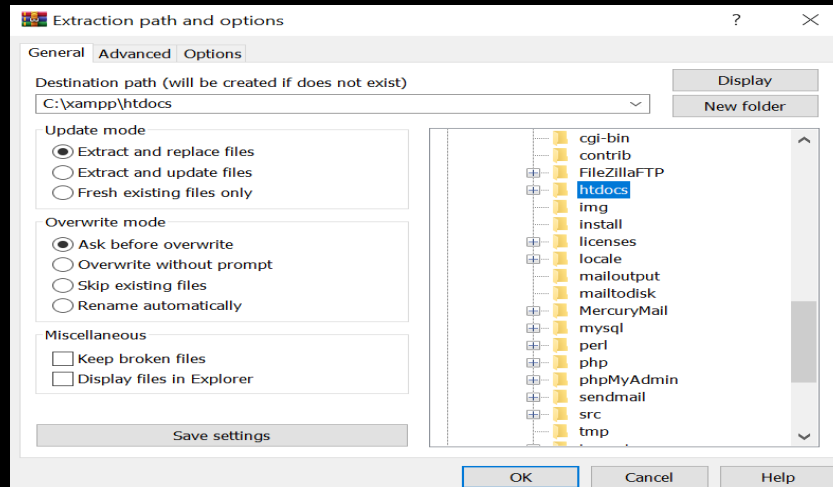

The installation of this project is very simple and easy!

Step1:Download and Install Xaamp on your pc/laptop by this video tutorial

<https://www.youtube.com/watch?v=VCHXCusltqI>

Step2:Then Download the project from this link

Step3:Then Install/Extract the project with WinRAR

Extract the project zip file to this directory C:\xampp\htdocs is your xaamp is installed in C drive

And

D:\xampp\htdocs is your xaamp is installed in D drive and same applies to any drive accordingly

Step4:Open xaamp and turn on Apache and MySQL.

Step5:Now go into any browser and search localhost/phpmyadmin

Step5)Then create a new database named pearl_ecommerce

1) Click on New option to create your new database.

2) Name your database according to your requirement.

3) Click on Create option to create your new database.

The screenshot shows the phpMyAdmin interface. On the left sidebar, the 'New' button is highlighted. In the main area, the 'Create database' form is visible with the database name 'id16310745_gfgdatabase' and the collation 'utf8mb4_general_ci'. The 'Create' button is highlighted. Below the form, a table lists existing databases and their collations.

Database	Collation	Action
<input type="checkbox"/> gfg_db	utf8mb4_general_ci	Check privileges
<input type="checkbox"/> information_schema	utf8_general_ci	Check privileges
<input type="checkbox"/> mysql	utf8mb4_general_ci	Check privileges
<input type="checkbox"/> performance_schema	utf8_general_ci	Check privileges
<input type="checkbox"/> phpmyadmin	utf8_bin	Check privileges
<input type="checkbox"/> test	latin1_swedish_ci	Check privileges

Total: 6

☐ Check all With selected: [Drop](#)

Step6)Now select pearl_ecommerce from sidebar and then click on import option and top

Importing into the database "hms"

File to import:

File may be compressed (gzip, bzip2) or uncompressed.
A compressed file's name must end in **[format].[compression]**. Example: **.sql.zip**

Browse your computer: (Max: 40MiB)

Choose File No file chosen

You may also drag and drop a file on any page.

Character set of the file:

utf-8

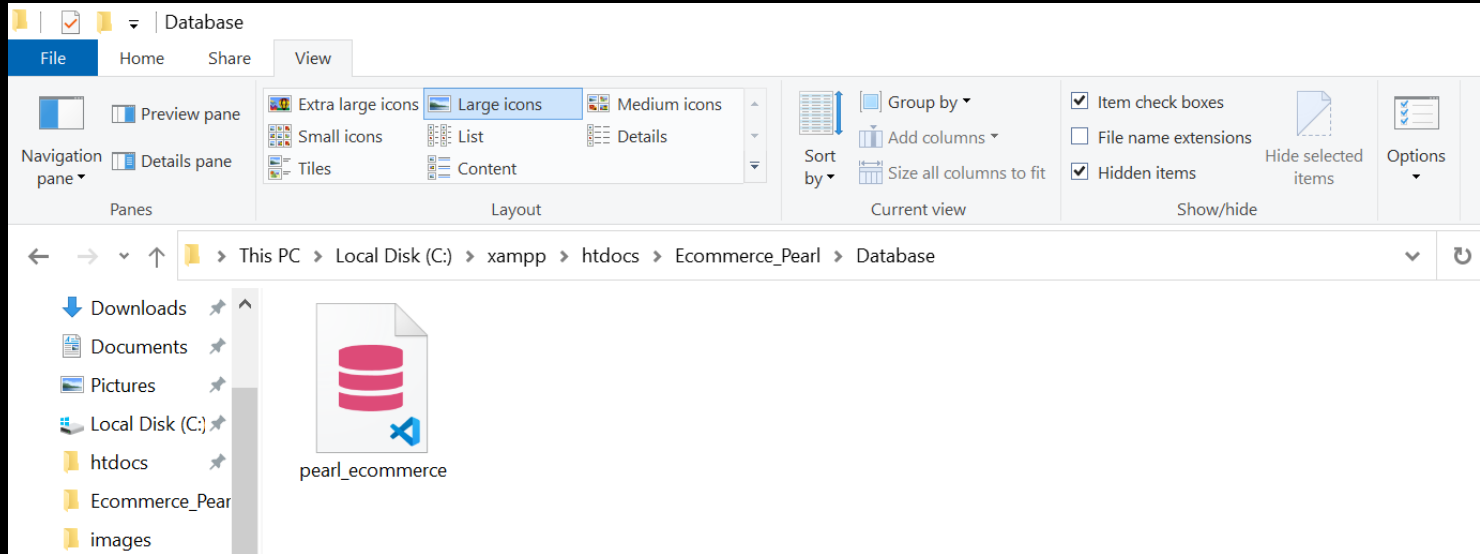

Partial import:

☒ Allow the interruption of an import in case the script detects it is close to the PHP timeout limit.
This might be a good way to import large files, however it can break transactions.

Skip this number of queries (for SQL) starting from the first one:

0

Step7)Then select sql file from Ecommerce_Pearl/Database/pearl_ecommerce.php

Step8)Every time you want to see your website turn on the xaamp follow the same process and then in browser write

localhost/Ecommerce_Pearl —————> As a customer/Admin

localhost/Ecommerce_Pearl/Dashboard —————> As an Admin only

And Enjoy your are ready to go!

```
<?php
```

```
echo 'Thank You';
```

```
?>
```
